BOSCH
Invented for life

Technologies that not only improve our life today, but tomorrow as well.

Green Technology inside
This signet denotes products that focus on energy and water efficiency while achieving top performance based on Bosch technologies – and, like all Bosch products, have been manufactured with the aim of minimising their impact on the environment. The signet stands for the resource-efficiency of our products – quite simply, for their 'Green Technology'.

Great journeys start with a single step
Resource efficiency is a subject that affects us all. Continuing climate change caused by the damaged ozone layer is the result of carbon dioxide (CO^2) emissions from the burning of fossil fuels. These emissions are increasing on a daily basis due to the vast amount of resources we consume. To minimise our consumption, we need to slow down the rate of growth by making more efficient use of our resources. At Bosch, we design some of the most efficient home appliances in the world. For example, our ActiveWater™ dishwashers are amongst the most resource-efficient in the world, generating the cleaning power of over 4000 litres from as little as 12.3 litres per wash. Selected induction cooktops feature an 'Energy Consumption Display' and selected rangehoods, Series 8 ovens and compact ovens now include the energy-efficient EcoSilence Drive® brushless motor.

Buying Bosch resource-efficient appliances means you can reduce your water and energy consumption without compromising on performance. At Bosch, we believe you should never have to sacrifice excellence to embrace the planet we live on.

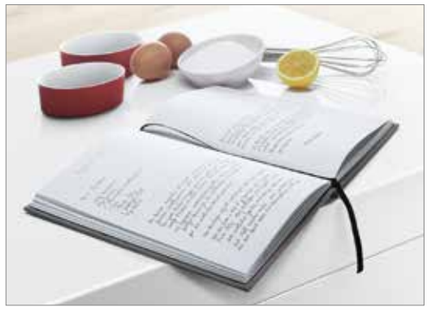
Series 8 | Automatic functions

The first recipe collection in the form of an oven.

Bosch Assist

You could easily search through cookbooks and family recipes without ever finding the exact temperature or cooking time for that favourite dish. Thanks to Bosch Assist, you don't have to. The advanced sensor technology found in PerfectRoast and PerfectBake™ – combined with the functionality of automatic programs as we know them today – offers an extensive menu of food categories that help create your perfect meal. Simply select the desired dish, press start and your oven automatically sets the ideal heating mode, temperature and length of time, monitoring and modifying the cooking as required for the best results. Of course, you can also select these settings yourself every bit as easily.



PerfectBake™

Baking has never been easier, thanks to the unique PerfectBake™ sensor. This function constantly measures the precise moisture level of your dishes and automatically adjusts the entire baking process, which means you'll never have to set the heating mode, length of time or temperature ever again. Simply choose the type of dish, such as 'Cake in Tin', press start and let your Bosch oven bake your cake to perfection*.

Scan QR code for more information on PerfectBake™

PerfectRoast

Achieve the perfect roast lamb, Christmas turkey, stuffed meats and fish. The PerfectRoast meat probe features three sensitive measuring points and uses the lowest temperature reading to determine the core temperature before calculating the residual cooking time. The results are simply perfect. Used manually or with Bosch Assist, you can modify the suggested core temperature (within a recommended range) and combine with microwave and steam cooking functions.

**Only works from a cold start. Do not open the door during the cooking process or you will have to continue manually. Features may vary depending on models. Please check individual product specifications.*

Series 8 | Convenience and safety

Fits every kitchen and every need.

We all have different needs in the kitchen, which is why we designed the new Series 8 ovens with a variety of features. Whether it's safety, convenience or capacity, Bosch Series 8 offers the right solution.

Telescopic rail system
The Bosch telescopic rails are fully extendable and are ideal for loading and removing trays with ease. Whether you choose a single or double rail option, all shelves are pyrolytic-safe and compatible for microwave and steam cooking. Trays are also interchangeable between full-sized and compact ovens, excluding the pure steam compact oven.

Lighting
Depending on the model, Series 8 ovens offer our classic, halogen lighting, LED ceiling light or the new multi-level LED lighting.

Energy efficient LED lighting offers vibrant illumination and longevity. The multi-level LED lighting offers illumination on each level, which is exceptionally convenient when baking on multiple levels.

Integrated halogen lighting ensures the interior cavity is brightly lit. More efficient than standard lights, they are durable and are designed to last longer.

Extra large cavity
Bosch Series 8 ovens offer up to 71 usable litres of cooking space and larger baking trays. The increased cavity creates more uniform baking results due to the improved heat circulation between the racks.

Precise temperature control
Electronic thermostats monitor the ovens cavity temperature to maintain temperature consistency during the cooking process.

Automatic switch-off
If left unattended the oven will switch-off after a period of time.

Child lock
Bosch Series 8 ovens are equipped with a child lock that prevents unwanted changes to settings. The control panel is locked so the appliance can only be switched off using the On/Off button.
Optional door lock function on selected models.

CoolTouch doors
For added safety, selected Bosch single ovens are fitted with quadruple-glazed CoolTouch doors. The reflective inner glass is designed to keep the heat in, while providing a safe-to-touch door on the outside.

Residual heat indicator
When the appliance is switched off, the display ring shows the residual heat in the cooking compartment. As the residual heat cools down, the display ring becomes darker then disappears.

Cabinetry cooling fan
The fan circulates cool air around the oven to keep the appliance and the surrounding cabinetry free from the hot air vented by the oven.

SoftMove
Thanks to a special damping mechanism, the oven door opens and closes softer and quieter than before. This convenient feature not only offers a premium finish, it also protects the oven and door during the life of the oven.

Features vary depending on models. Please check individual product specifications.

Ovens | Cleaning functions

At last, someone in the house who enjoys cleaning up.

Anyone who has ever cleaned an oven by hand knows it can be exhausting and time-consuming. Thanks to the new EcoClean Direct and pyrolytic self-cleaning function, manual cleaning is a thing of the past. At the touch of a button, the self-cleaning pyrolytic program reduces residual food to ash, leaving your oven sparkling clean.

New

EcoClean Direct
The self-cleaning surfaces in the oven are directly coated with a patented, microfine ceramic material. This coating absorbs and breaks down grease and residue during baking and roasting. Before activating the cleaning function, all you need to do is wipe down the base of the oven and the inside of the glass door. For added convenience, the oven also prompts when it needs to run a cleaning cycle. Of course, you can also activate the cleaning program at any time.*

Scan QR code for more information on EcoClean Direct

Pyrolytic cleaning
During the pyrolytic cleaning function, the oven heats up to 480°C to burn off grease and food residue. What's left is a small residual amount of ash in the base of the oven that can be easily wiped clean. There are three different cleaning programs to choose from, depending on the degree of residue that has accumulated. The pyrolytic-safe enamelled trays, shelf racking# and telescopic rails, mean you can now leave them in the oven during the cleaning program too.

Scan QR code for more information on Pyrolytic self-cleaning

**Please remove all accessories when activating the specific EcoClean Direct program. #Metal racks may show slight discolouration after prolonged use of the pyrolytic function. To prevent this you may choose to remove the wire racks during the pyrolytic cycle.*
Features may vary depending on models. Please check individual product specifications.

Ovens | Heating functions

Because there's hot, and then there's hot.

Perfect baking and roasting not only requires the right temperature, but also the appropriate heating function, too. From 4D HotAir to HotAir Eco, Bosch ovens offer heating functions that deliver everything from haute cuisine to everyday feasts.

New

4D HotAir*
Thanks to 4D HotAir, you can place your food on any shelf from level one to four, and the results will be consistently perfect. The rotating fan alternates its direction during cooking to distribute heat evenly on every level. And for reliable results 'top to bottom', you can also bake and roast on up to four different levels simultaneously.^

HotAir Eco
Our research shows that cooking on a single level is the most common form of cooking in an oven. HotAir Eco uses less energy by using a single tray. This energy efficient function distributes less heat into the oven and uses residual heat to maintain the set temperature.

Top and bottom heat*
Uses both the upper and lower heating elements. Heat travels to the centre of the oven, which is the best position to obtain the selected temperature. Suitable for traditional baking and roasting, and offers best results for cakes with moist toppings.

New

Top and bottom heat Eco
In addition to the Top and bottom heat function, selected Series 8 ovens feature a new eco-friendly mode, which supports cooking on a single shelf for energy efficient cooking. Prepare perfect sponges, pound cakes, delicate pastries and bread rolls while saving valuable energy.

Bottom heating
For cooking in a bain-marie and for the final baking stage. The heat is emitted from the lower heating element.

New

Intensive heat
Combines the top element with a more powerful bottom heating element that is perfect for crispy bases and baking in tins.

Hot air grilling*
Achieve rotisserie-style cooking for meat and poultry. The grill and fan alternate, which produces even and crisp cooking results.

Grill, large area
For grilling flat items, such as steaks and sausages, for making toast, and for cooking a gratin.

Grill, small area
For grilling small amounts of steaks or sausages, for making toast or where grilling a smaller surface area is required.

Pizza setting
Create crispy pizzas or give any dish that extra heat that's needed from underneath by using a combination of heating elements.

New

Slow cooking
For gentle and slow cooking of seared, tender pieces of meat in ovenware without a lid. The heat is emitted evenly from the top and bottom at low temperatures.

New

Keeping warm*
A new feature that keeps cooked food warm.

New

Preheat ovenware
A new feature that is useful for preheating ovenware and even dinnerware.

New

Drying
A new function for drying fruits, vegetables and herbs with maximum flavour. This function can also be used for drying out the oven cavity after the added steam function has been used.

Sabbath mode
Set a maximum timer of up to 74 hours using the Sabbath function. You can keep the food in the cooking compartment warm without having to switch the oven on or off.

Rapid heating
With rapid heating, you can shorten the heat-up time for selected heating functions, including 4D HotAir and Top and bottom heating.

**Possible to use added steam for this type of heating (operation only possible when the water tank is full). ^To cook on all four levels simultaneously, four wire racks are required for best results. For up to three levels, all accessories are suitable, ie. universal tray or baking tray.*
Features may vary depending on models. Please check individual product specifications.

New!

Ovens | Added steam

Add a touch of steam.

Added steam function
Enhance your cooking results by adding a little bit of moisture from time to time, thanks to the added steam function. Whether you're reheating dishes, proving dough, baking or roasting, you can set the oven to automatically add bursts of steam, or you can add steam manually to regulate the intensity. Create succulent roasts and perfectly browned bread crusts with ease. Added steam works with: 4D HotAir, Hot air grilling, Top and bottom heating and Keep warm.

Reheating*
For plated meals and baked items. Cooked food is gently reheated. The steam ensures the food does not dry out.

Dough proving*
For yeast dough and sourdough. Dough will rise considerably quicker than at room temperature. The surface of the dough does not dry out.

Compact appliances | Built-in coffee machine

Now your favourite café is open 24/7.

Espresso, cappuccino or latte macchiato? With the Series 8 built-in coffee machine, you can treat yourself and your guests to your favourite beverage at the touch of a button. Bosch Barista technology guarantees a full-bodied aroma and perfect crema for coffees as delicious as those brewed in your favourite café.

SensoFlow system for a perfect aroma
The optimal brewing temperature for an espresso is between 90°C and 95°C. If the temperature is any higher or lower, the flavour of the beans is only partially released or the coffee is bitter. Our smart SensoFlow system heats the water to just the right temperature, for a full-bodied espresso aroma from the first to the last cup.

A choice of coffee at the touch of a button
Want the perfect espresso, cappuccino or latte macchiato? With the OneTouch function, it'll be ready in an instant. Innovative technology regulates the release of coffee, hot milk and foam to deliver the beverage of your choice at the touch of a button.

Automatic cleaning of the milk system
Now you can clean your coffee maker as easily as you prepare your morning pick-me-up. Each time you make a coffee drink with milk, the milk system is automatically rinsed out with a blast of steam. The coffee machine takes total charge of the milk system's daily maintenance, so that you can concentrate on enjoying your cappuccino or latte macchiato instead of cleaning.

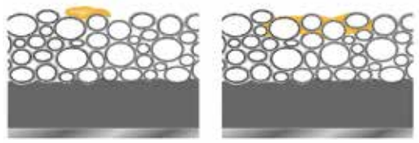
Series 6 | Oven features

Real benefits meet classic design.

Series 6 feature models offer a broad range of extra benefits. The unique door design, glass-on-metal door construction, all-steel handles and retractable controls ensure these ovens stand apart.

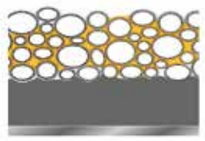
Unique to Bosch

Oven cleaning made easy with EcoClean
The self-cleaning liners in the oven are coated with a patented, microfine ceramic material. This coating absorbs and breaks down grease and residue during baking and roasting. All you need to do is wipe down the base of the oven and the inside of the glass door before activating the cleaning function. Of course, you can also activate the cleaning program at any time.*

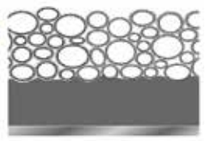


The microfine ceramic lining...

...soaks up the grease deposits...



...breaks them down and...



...regenerates when heated.

Precise temperature control
Electronic thermostats monitor the oven's cavity temperature to maintain temperature consistency during the cooking process.

Oven clock and timer with programming
The electronic clock displays time of day and also acts as a countdown timer with an audible beep to indicate the end of the timer function. Programming adds extra convenience. Simply select the end-time (when you arrive home, eg. 6.30pm), the length of cooking, along with the cooking function and temperature, and the oven will do the rest.

Oven cavity
Selected Bosch 60cm ovens have an interior capacity of 67 usable litres (net), with the 90cm model boasting 77 usable litres (net). This makes them capable of roasting even the largest cuts of meat.

Retractable controls
The retractable controls not only make the oven easy to operate but also maintain a clean line when the oven is not in use, making the oven control panel easy to clean.

Cabinetry cooling fan
The fan circulates cool air around the oven to keep the appliance and the surrounding cabinetry free from the hot air vented by the oven.

Enamel coating
The grey enamel interior coating is easy-to-clean and the lighter colour improves visibility during cooking.

Built-in single ovens
Our ovens combine high-quality stainless steel and glass for a sleek finish on all models. Multiple cooking and cleaning options offer convenience.

Double ovens
Bosch double ovens allow you to roast in the bottom oven cavity while grilling in the top oven for maximum cooking convenience.

Induction cooktops
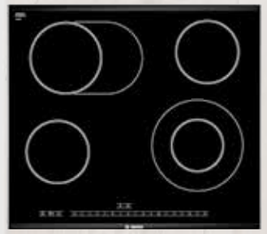
Quite simply, Bosch has a range of induction cooktops that are designed to make it easier and quicker for you to create the dishes you love.



Ceramic cooktops
With their electronic touch-controls and flexible cooking zones, Bosch ceramic cooktops combine great looks with smart function and design.

Electric cooktops | Induction highlights

The best cooking needs just one ingredient. Bosch Induction.

Modern cooking offers so many wonderful new tastes and textures, you need a cooktop that’s flexible enough to keep up.

Induction cooktops offer the most efficient way of cooking at lower temperatures, ie. melting chocolate, etc.

Old pots, new technology
Most of your old pots will also work with induction if they have a magnetic base. All pots and pans with ferromagnetic bases are suitable for induction. So, if a fridge magnet sticks to your pot, you know it's induction-ready. In general, special stainless steel, iron and enamel are all suitable.

Cook with a light touch.
When you’re preparing a meal, there’s no time to waste with complex cooking controls. With your Bosch Induction cooktop, you’ll find a selection of brilliantly intuitive controls, all boasting 17-stage power settings.

DirectSelect 2.0
Maintain control even in the most hectic kitchen situations. Select your desired power level – including intermediate levels – with complete accuracy.

DirectSelect 1.0
Enjoy total convenience with DirectSelect. Simply select the required power level from the power settings laid out on the cooktop, without the need to press +/- repeatedly.

TouchSelect
With this control panel, you can regulate the desired cooking zone easily. Select your cooking zone and use the +/- keys to choose the power level you need.

Features may vary depending on models. Please check individual product specifications.

Put the Flex in flexibility
Introducing Bosch FlexInduction®, the result of decades of research and development. Introducing freedom in the kitchen.

Ideal for small pots, large pots, multiple pans, frying pans or casserole dishes – you name it, the system allows you to control pots and pans separately.* An electromagnetic current applies heat only where it’s needed – in the pot. At the flick of a switch, two induction zones become one large induction surface.

CombiInduction – cooking with you side-by-side
Bosch CombiInduction lets you switch from small to large and oversized pans, like Teppan Yaki, simply and easily. So now there’s no limit to the tastes you can create.

CombiZone
Because you can choose the size of the heated area, with Bosch CombiInduction you have the freedom to use your biggest pans and baking trays for more adventurous cooking. Switching from small to large pans is as simple as a single touch that merges two cooking zones into one.

Unique to Bosch

MoveMode
When your recipe requires you to switch from boil to simmer at just the right moment, MoveMode is there when you need it. Switch from level 9 to level 1 by simply sliding your pot. MoveMode lets you move seamlessly from your first high-powered cooking task to the next, without a hiccup, and always in control.

FlexZone allows you to control a maximum of only 2 independent cooking zones.

Electric cooktops | Induction features

Bosch Induction: Setting the standards.

On every Bosch Induction cooktop, you'll find clever features that set them apart from the ordinary.

Model featured: PIN675N17E
Features may vary depending on models. Please check individual product specifications.

17-stage power setting
Enjoy total control on every recipe with 17-stage power settings. This function allows cooking zones to be set in increments of 0.5 (eg. 0.5, 1, 1.5, 2...9).

PowerBoost – now with even more power!
PowerBoost channels increased power to a selected zone to turbocharge the cooking process. With PowerBoost, you can boil 2 litres of water almost three times faster than on a conventional glass-ceramic cooktop.

Dual function timer including automatic switch-off for each zone
Use the independent audible timer to set the length of cooking time or set the cooking zone at a specific temperature (ie. level 5.5) for up to 99 minutes – ideal for busy households. Once the selected time has been reached, the cooking zone is switched off automatically.

Automatic pot detection
Bosch Induction cooktops feature automatic pot detection, which recognises the diameter of the cookware and determines the size of the cooking zone accordingly. If the pot is removed, the control panel indicator will flash and remain inactive until the pot is detected.

QuickStart
Start cooking quicker. New Bosch QuickStart functionality automatically detects the location of your pot and displays the cooking zone on the control panel. Just select the power level and you're away.

Available on selected models only.

ReStart
Things happen quickly in the kitchen – if you spill something on the control panel or accidentally switch-off the cooktop, ReStart will store your last selected settings. Those settings can be instantly recalled by simply pressing the main power switch within 4 seconds.

Available on selected models only.

Energy Consumption Display
Each time you finish cooking, your Energy Consumption Display shows exactly how much power you've used. So if you wish, you can adapt your cooking style to save energy and money. (For example, placing a lid on a pot can help reduce your energy consumption).

Available on selected models only.

WipeProtection
Stay in complete cooking control even while you've had a spill or boil-over. Bosch WipeProtection locks the control panel for 20 seconds so you can clean the surfaces easily, without losing your cooking settings.

Child lock
Maximum safety for tiny hands. Lock your cooktop's control panel and prevent accidental little chefs from 'helping out' and hurting themselves. Enjoy the reassurance of maximum safety for both you and your loved ones.

2-stage residual heat indicators
Provides clear indication of when a zone is still hot after use. Two levels: 'H' means residual heat sufficient to finish off cooking or to keep items warm; 'h'- residual heat insufficient to cook, but zone is still hot enough to advocate caution.

Automatic safety switch-off
Never worry again if you have forgotten to turn off the cooktop. If you've stopped using it, your Bosch Induction cooktop will automatically shut down.

Electric cooktops | Ceramic overview

Ceramic cooktops.

With electronic touch-controls and extendable cooking zones, Bosch ceramic cooktops combine great looks with smart function and design. The smooth ceramic glass cooktop surface is tough and durable as well as being practical and easy-to-clean.

Dual circuit cooking zone
Available on selected ceramic cooktops, this energy-saving feature allows you to select a smaller cooking zone for small pans, and a larger zone for larger pans.

Extendable zone
Selected cooking zones can be extended giving you a much larger area to accommodate big saucepans, casserole and other (special) cooking dishes.

Automatic electronic boil start
The automatic electronic boil start heats the hotplate using the highest heat setting and then reverts down to the simmer setting you have previously selected, reducing the risk of boil overs.

QuickTherm technology
For improved control and flexibility, heat is delivered to the cooking zone in approximately three seconds. This feature is quicker than standard ceramic zones or electric-sealed plates.

Rangehoods | Design options

The world of Bosch rangehoods.

With a wide variety of sizes, types and finishes to choose from, it’s easy to find the right Bosch rangehood to perfectly suit your kitchen's design.

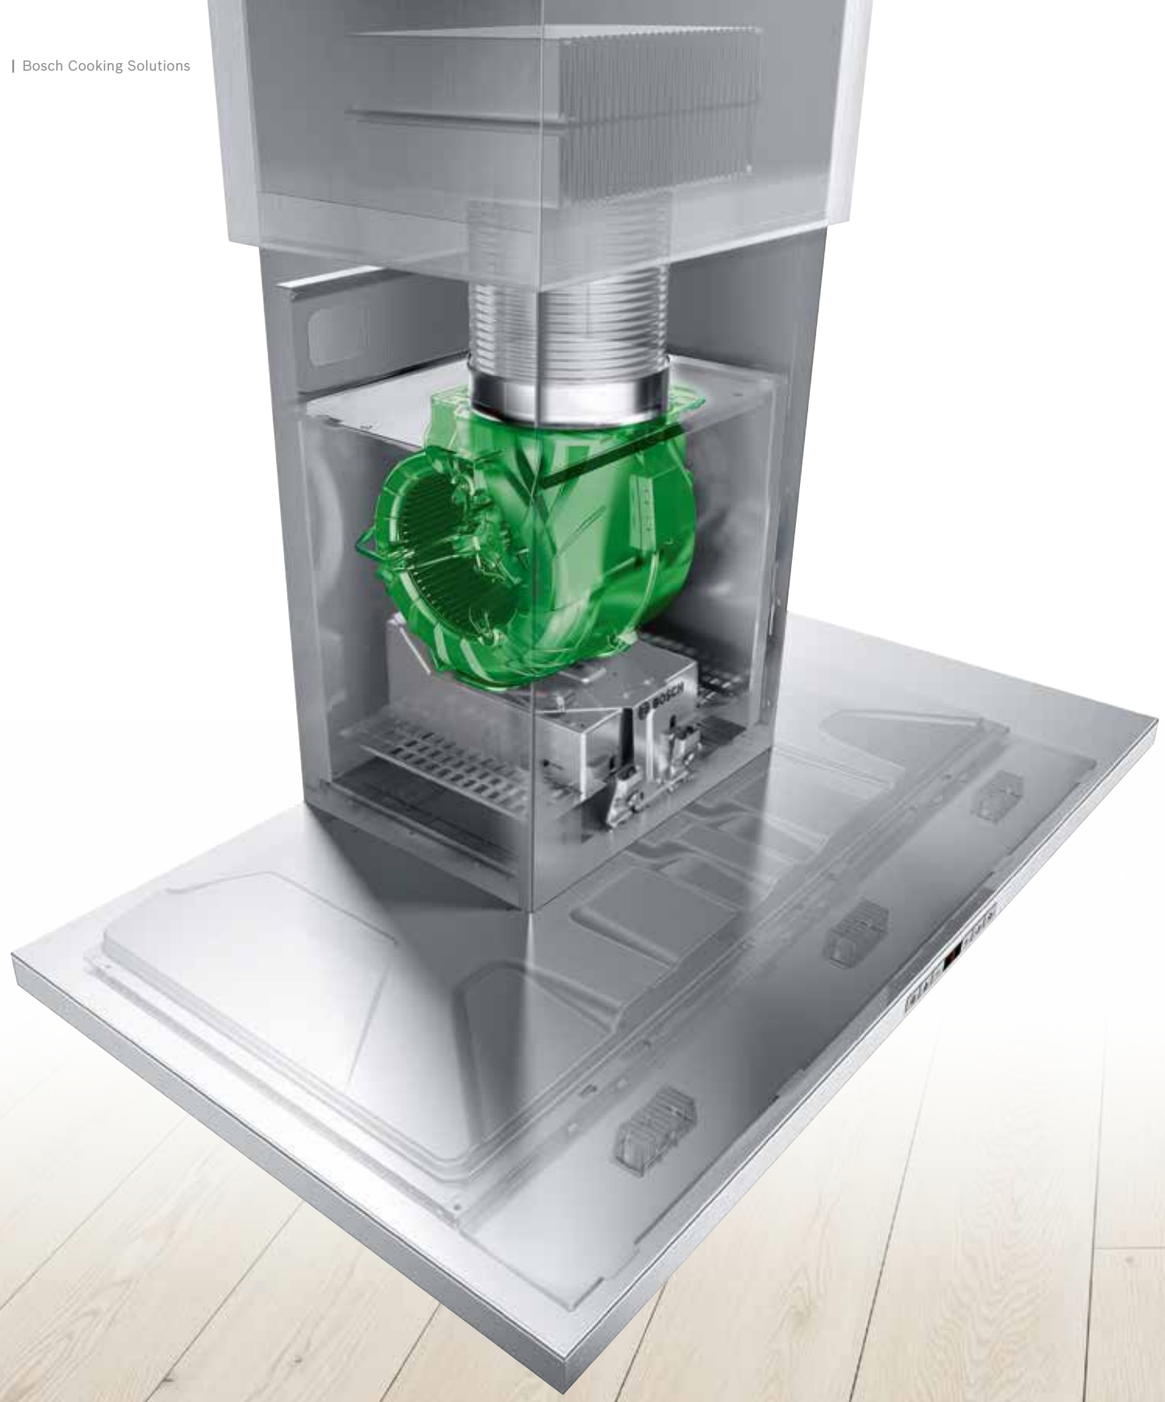
Curved glass
Metal and glass for a contemporary look, curved to give smooth lines.

Box style
Chimney hoods in a box design are available in slim or super-slim versions. Included in the range are models with bevelled lower edges for a really super-slim appearance.

Pyramid
Impress with classic lines and gently inclined contours.

Integrated
Neatly concealed rangehoods.

Slideout
Extends when in use and slides neatly away when not in operation.



Rangehoods | Convenience

Bosch in every detail.

Why shout when you can whisper?
Relax in a quieter kitchen with family and friends
The new EcoSilence Drive® motor operates without carbon brushes, eliminating the disadvantages of conventional motors. Instead of energy loss, wear and noise, you get efficiency, durability, and smooth operation. To reduce motor noise even further, we have optimised the airflow inside the hood. The result: low noise levels with high power.

Halogen lighting
Integrated halogen lighting ensures that the cooking area is clearly illuminated. They are more efficient than standard lights and are designed to last longer.

LED lighting
The new LED lights offer a longer lifetime and use less energy than conventional halogen lighting. Additional convenience is offered with SoftLight which gently fades lighting in and out with dimmer function.

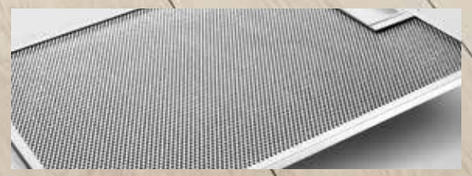
Dishwasher-safe metal filters
For easy cleaning, all Bosch filters can be safely loaded into any Bosch dishwasher for sparkling clean results.

Rim ventilation filter
With its smooth uninterrupted surface and grease separation of 80-92%* the rim ventilation filter from Bosch has a multi-patented filter sealing system and flow-optimised filter system with 12-layer filter mats.

*Depending on motor output

Stainless steel filter
The stainless steel filter provides an exceptionally high level of grease absorption. It is concealed behind an elegant stainless steel cover with a stainless steel handle.

Metal grease filter
Metal grease filters are required for ducted and recirculating systems to filter grease and other solid particles out of the extracted air. To make sure these filters operate at maximum efficiency, they should be cleaned about twice a month.



Rangehoods | Controls

Plenty of installation options, optimal performance.

Variable power settings
All Bosch rangehoods feature variable power settings, which can be set to effectively remove odours, smoke and moisture caused by cooking. Many models also feature an intensive extraction setting, which gives an extra boost to the performance when required.

Automatic run-on
Selected Bosch rangehoods automatically continue to run-on for approximately 10 minutes after normal operation to ensure remaining odours are removed. The rangehood then automatically switches off.

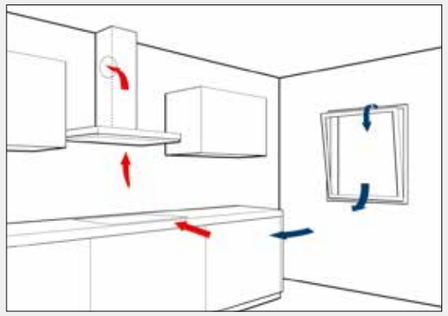
Automatic power revert
When the intensive setting is selected, it can be set to automatically revert to a pre-defined setting after a short period of time.

Electronic filter saturation indicator
For maximum extraction efficiency, an illuminated light indicates when the filter needs cleaning. For hassle-free cleaning, the one-piece filter can be loaded into your Bosch dishwasher.

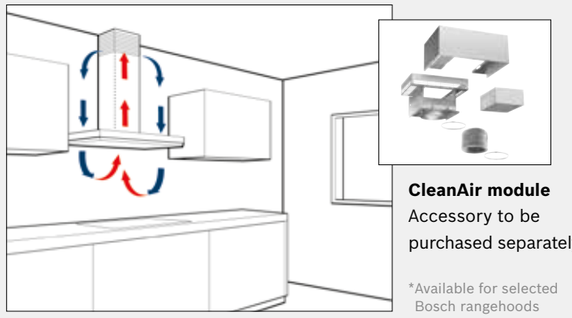
Electronic control
3 power levels + 2 additional intensive settings, automatic run-on, filter saturation indicator, automatic power revert and SoftLight with dimmer function, control at your fingertips.

Electronic button control
This control provides you with 3 power levels + 1 intensive setting. There's also a push-button for turning the lights on and off. And to make operation even easier, the buttons are back-lit.

Rocker switch control
It doesn't get any easier: 3 push-buttons for 3 power levels and one for turning the lights on and off.



Ducted extraction
Ducting out is the most effective method of extraction. Ideally the rangehood should be sited on an outside wall, or an outside wall can be reached via ducting. All Bosch extractors are now standardised to facilitate a 150mm diameter outlet for maximum performance, although smaller ducting can be used if required. Please refer to the installation guide for further advice on best practice installation.



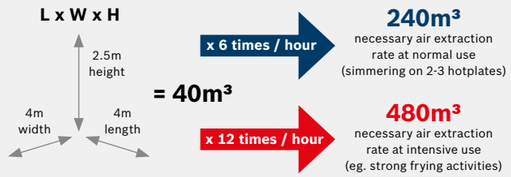
CleanAir module
Accessory to be purchased separately*

*Available for selected Bosch rangehoods

Recirculation kit
Odours are extracted and filtered, then purified air is returned to the room. The kit comprises of a carbon filter and all components needed to ensure that odour free air is returned into the kitchen. To maintain performance, the carbon filter should be replaced on a regular basis. A recirculation kit needs to be purchased as a separate accessory.

What extraction rate do I need?
It is recommended that air be extracted (or exchanged) in a room depending on your type of cooking: minimum of 6 times per hour; and a maximum of 12 times per hour.

Air extraction is measured using room volume. This is calculated by multiplying Length x Width x Height.



L x W x H
2.5m height
4m width
4m length
= 40m³
x 6 times / hour
240m³
necessary air extraction rate at normal use (simmering on 2-3 hotplates)
x 12 times / hour
480m³
necessary air extraction rate at intensive use (eg. strong frying activities)

Bosch extraction rates are tested inline with EU standards.
See page 90-91 for more information.

Cookware for Induction Cooktops

Important:

Induction heating relies on creating a controlled electro-magnetic field, which requires magnetic-based cookware. This includes stainless steel cookware with a magnetic base, enamelled steel or cast-iron. Glass, aluminium, copper or ceran pots are not suitable for use. If you are unsure, hold a magnet to the base of the cookware. If it attracts and holds, then the cookware is most probably suitable.
